

Abstract Amendment

Please amend the abstract as follows:

The invention relates to an electric contact crimping method carried out on an electric wire, said contact ~~comprising~~ including a crimping section provided with a barrel for receiving the electric wire, said barrel ~~comprising~~ including a part which is used to clasp the wire by deformation. The method ~~comprises~~ includes a first crimping step carried out at a first crimping height (~~h1~~) by folding a first surface of the crimping section on the wire by means of a crimping tool ~~comprising~~ including a stamping element and an anvil and a second crimping step carried out at a second crimping height (~~h2~~) which is lower than the first, in a localized area of the crimping section. The invention also relates to a contact obtained according to said method.
